Data & AI Bootcamp

Business Intelligence, Data Analytics & Data Engineering

Find your true north.

nurnex.com · bootcamp@nurnex.com · +1 (339) 206-8081

2026 – 2027

WELCOME

Nurnex Data & AI Bootcamp.

Live, instructor-led online training that takes you from beginner to job-ready Business Intelligence and Data Analyst in 3 or 6 months.

Small cohorts, real datasets, weekly hands-on labs, and career support. You graduate with a portfolio, a Nurnex certificate, and the skills companies actually hire for. Everything is taught live — no pre-recorded videos, no self-paced guessing.

01 · PROGRAMMES

Which programme is right for you?

3-Month: Data Analyst Fast Track — $2,500

Best for people who want to start working as soon as possible. You learn the three core skills every company hires for: **Excel, SQL, and Power BI**. These are the #1 most requested skills in data analyst job postings. After 12 weeks you can build dashboards, query databases, and present insights — enough to land a junior data analyst role.

You graduate as: **Junior Data Analyst** | Minimum starting salary: **$50,000 – $70,000**

6-Month: Full BI & Data Engineer — $5,000

Best for people who want a stronger resume, higher salary, and more career options. You get everything from the 3-month programme, **plus Python, Microsoft Fabric, Databricks, Power Platform, and data engineering concepts**. Companies pay more for people who can not only build dashboards but also build the data pipelines that feed them. Career support is included.

You graduate as: **BI Analyst / Junior Data Engineer** | Minimum starting salary: **$70,000 – $95,000**

Side-by-side comparison

Skill / Feature	3-Month	6-Month
Excel (Advanced + Power Query)	Included	Included
SQL (Fundamentals + Advanced)	Included	Included
Database Design	Included	Included
Power BI (Fundamentals + Advanced)	Included	Included
DAX (Basic + Advanced)	Included	Included
Data Modeling (Star Schema)	Included	Included
Data Storytelling & Presentation	Included	Included
Row-Level Security & Governance	Included	Included
Python (Pandas, Automation, APIs)	—	Included
Data Visualization (Matplotlib, Seaborn)	—	Included
Statistics for Analysts	—	Included
Microsoft Fabric (Lakehouse, Pipelines)	—	Included
Databricks (Spark, Delta Lake)	—	Included
Power Platform (Apps + Automate)	—	Included
Data Engineering Concepts	—	Included
Career Support (LinkedIn, Resume, Interviews)	Add-on: $750	Included
Mock Interviews	Add-on: $750	Included

Skill / Feature	3-Month	6-Month
Post-Grad Support (weekly, 1 month)	Add-on: $750	Included
Capstone Projects	1	2
Total Hours	60	120
Certificate	Data Analyst	BI & Data Engineer

Can't decide? Start with 3 months. If you want to continue, upgrade to 6 months and pay only the $2,500 difference. Nothing wasted.

02 · SCHEDULE

Class format & weekly rhythm.

Group A

Day	Time	Duration	Format
Monday	5:00 – 7:00 PM	2 hours	Lecture + Live Demo
Wednesday	5:00 – 7:00 PM	2 hours	Lecture + Hands-on Practice
Saturday	10:00 – 11:00 AM	1 hour	Lab + Exercises + Q&A;

Group B

Day	Time	Duration	Format
Monday	7:45 – 9:45 PM	2 hours	Lecture + Live Demo
Wednesday	7:45 – 9:45 PM	2 hours	Lecture + Hands-on Practice
Saturday	11:45 AM – 12:45 PM	1 hour	Lab + Exercises + Q&A;

45-minute break between groups. Both groups follow the same syllabus and receive the same instruction.

Programme totals

	3-Month	6-Month
Total Weeks	12	24
Hours Per Week	5	5
Total Class Hours	60	120
Quizzes	3	6
Practical Exams	2	4
Capstone Projects	1	2

What's included

- Live classes 3x per week with an experienced instructor
- All class recordings available within 24 hours
- Downloadable slides, datasets, and cheat sheets
- Weekly homework with personalised feedback
- Quizzes and practical exams
- 1-on-1 office hours — book one 1-hour slot per week by appointment
- Student community (WhatsApp / Discord group)
- Nurnex certificate upon graduation
- Portfolio-ready capstone project(s)

03 · 3-MONTH SYLLABUS

Data Analyst Fast Track.

12 weeks · 60 hours · Excel, SQL, Power BI, Data Storytelling

Phase 1: Foundations (Weeks 1–4)

01 Excel Power User (Part 1)

Monday	Welcome + Excel essentials: navigation, formatting, basic formulas (SUM, AVERAGE, COUNT, IF, SUMIF, COUNTIF)
Wednesday	Advanced formulas: VLOOKUP, INDEX/MATCH, nested IFs, text functions (LEFT, RIGHT, MID, CONCATENATE)
Saturday	Lab: Clean a messy sales dataset using formulas. Fix errors, missing values, wrong formats

Homework: 20-question formula exercise

02 Excel Power User (Part 2)

Monday	Pivot tables, grouping, calculated fields, slicers. Charts: column, line, combo, formatting for business
Wednesday	Power Query in Excel: import CSV/web, transform, merge tables, remove duplicates, load clean data
Saturday	Lab: Raw data → Power Query cleanup → pivot table → formatted dashboard in Excel

Homework: Build a budget tracker with pivot tables + charts

03 SQL Fundamentals (Part 1)

Monday	What is a database. Install SQL tool (Azure Data Studio). Connect to practice database. First SELECT, WHERE, ORDER BY
Wednesday	Filtering deep dive: LIKE, IN, BETWEEN, AND/OR, NULL handling. Practice on a retail database
Saturday	Lab: 25 query drills — answer business questions with SQL

Homework: 15 SQL exercises

Assessment: Quiz 1: Excel Fundamentals (20 questions)

04 SQL Fundamentals (Part 2)

Monday	JOINs: INNER, LEFT, RIGHT, FULL OUTER. When to use each. Join customers → orders → products
Wednesday	GROUP BY + aggregates: COUNT, SUM, AVG, MIN, MAX. HAVING clause. Revenue by region, orders per month
Saturday	Lab: 10 business questions using JOINs + GROUP BY

Homework: 10 queries combining JOINs and aggregations

Phase 2: SQL Mastery + Power BI Intro (Weeks 5–8)

05 SQL Advanced (Part 1)

Monday	Subqueries (in WHERE, FROM, SELECT). Common Table Expressions (WITH clause)
Wednesday	Window functions: ROW_NUMBER, RANK, LAG, LEAD, running totals, moving averages
Saturday	Lab: Complex queries combining CTEs + window functions

Homework: 10 advanced SQL problems

06 SQL Advanced (Part 2) + Database Design

Monday	Database design: tables, relationships, primary/foreign keys, normalisation. Draw ERD diagrams
Wednesday	CREATE, INSERT, UPDATE, DELETE. Build a database from scratch. Views intro
Saturday	Lab: Design a database for a small business — draw ERD, create tables, insert data, write queries

Homework: Complete database design + 5 queries

Assessment: Quiz 2: SQL (25 questions) | Exam 1: SQL Practical (15 questions, 90 min)

07 Power BI Fundamentals (Part 1)

Monday	Install Power BI Desktop. Interface tour. Import Excel. First visuals: bar chart, card, table. Publish to web
Wednesday	Data modelling: import multiple tables, create relationships, star schema concept, date tables
Saturday	Lab: Build a 3-visual report from a sales dataset. Publish and share

Homework: Build an HR report with 5+ visuals

08 Power BI Fundamentals (Part 2)

Monday	DAX basics: calculated columns vs measures. SUM, AVERAGE, COUNT, DISTINCTCOUNT, CALCULATE
Wednesday	DAX patterns: YoY growth, % of total, running totals. Conditional formatting, KPI cards, tooltips
Saturday	Lab: Build a full executive dashboard — KPIs, trends, breakdowns, slicers

Homework: Add 5 DAX measures to HR report

Phase 3: Power BI Mastery + Career (Weeks 9–12)

09 Power BI Advanced (Part 1)

Monday	Advanced DAX: CALCULATE with filters, ALLEXCEPT, time intelligence (SAMEPERIODLASTYEAR, TOTALYTD)
Wednesday	Data modelling advanced: star schema deep dive, role-playing dimensions, many-to-many, performance tuning
Saturday	Lab: Finance dashboard with YoY comparisons, budget vs actual, variance analysis

Homework: Add time intelligence measures

Assessment: Quiz 3: Power BI + DAX (20 questions)

10 Power BI Advanced (Part 2)

Monday	Row-Level Security, workspaces, apps, sharing, refresh schedules, Power BI Service
Wednesday	Power Query in Power BI: advanced transforms, parameters, dataflows intro
Saturday	Lab: Build a 4+ page report with navigation, drillthrough, bookmarks, RLS

Homework: Polish multi-page report (portfolio piece)

11 Data Storytelling + Soft Skills

Monday	Data storytelling: right chart for the message, colour psychology, removing clutter, 'so what?' framework
Wednesday	Business context: KPIs by industry, how to ask the right questions before building anything
Saturday	Lab: Each student presents their dashboard (5 min) with client-style feedback

Homework: Record a 3-minute video presenting your dashboard

12 Capstone + Career Launch

Monday	Capstone presentations: full project (raw data → SQL → Power BI → business story)
Wednesday	Career class: resume for data roles, LinkedIn optimisation, where to apply, salary expectations
Saturday	Graduation: certificate ceremony, portfolio review, intro to 6-month upgrade

Assessment: Exam 2 (Final): Power BI capstone — complete dashboard from raw data (take-home, 48 hrs)

04 · 6-MONTH EXTENSION

Full BI & Data Engineer (Weeks 13–24).

Students who complete the 3-month programme or enrolled in the 6-month programme continue with Python, cloud platforms, and data engineering.

13 Python Fundamentals

Monday	Install Python + VS Code / Jupyter. Variables, data types, strings, lists, dictionaries, loops, conditionals
Wednesday	Functions, parameters, return values. Read CSV files. Error handling (try/except)
Saturday	Lab: 20 Python exercises — loops, list comprehensions, string manipulation, file reading

14 Python for Data

Monday	Pandas: DataFrames, read_csv, filtering, sorting, groupby, merge, pivot
Wednesday	Data cleaning with pandas: missing values, duplicates, data types, string cleaning, datetime parsing
Saturday	Lab: Redo the Week 1 Excel exercise in Python — students see the power difference

Assessment: Quiz 4: Python Basics (20 questions)

15 Python Analytics

Monday	Visualisation: matplotlib, seaborn — bar, line, heatmap, scatter. When to use each
Wednesday	Statistics for analysts: mean, median, std dev, correlation, distributions, hypothesis testing basics
Saturday	Lab: Full exploratory data analysis on a real dataset — stats, charts, outliers, insights report

16 Python Automation

Monday	APIs: what they are, requests library, pull live data, JSON parsing
Wednesday	Automate reports: scheduled scripts, auto-generate Excel, send email with Python
Saturday	Lab: Build a pipeline — API → clean → Excel report → save to folder

Homework: Build your own automated pipeline

17 Microsoft Fabric (Part 1)

Monday	Fabric overview. Create workspace + lakehouse. Upload data. Explore files vs tables
Wednesday	Dataflows Gen2: connect to source, transform, load to lakehouse. Power Query in the cloud
Saturday	Lab: CSV → Dataflow cleanup → Lakehouse table → SQL endpoint query

18 Microsoft Fabric (Part 2)

Monday	Fabric pipelines + Spark notebooks. Run PySpark on big data
Wednesday	Fabric + Power BI: Direct Lake mode, semantic models, build report on lakehouse
Saturday	Lab: End-to-end — raw data → pipeline → lakehouse → notebook → Power BI report

Assessment: Quiz 5: Python + Fabric (25 questions) | Exam 3: Python Project (take-home, 72 hrs)

19 Databricks (Part 1)

Monday	Databricks overview, Spark, Delta Lake. Community Edition setup. Workspace, clusters, notebooks
Wednesday	PySpark basics: read, filter, select, groupBy, join. Spark vs pandas — when to use which
Saturday	Lab: Process 1M+ rows in Databricks — students experience real big-data speed

20 Databricks (Part 2)

Monday	Delta Lake + medallion architecture: Bronze / Silver / Gold layers. ACID, time travel, schema enforcement
Wednesday	Databricks SQL + dashboards: write SQL, create dashboards, schedule queries, alerts
Saturday	Lab: Build medallion pipeline — raw CSV (Bronze) → cleaned (Silver) → aggregated (Gold) → dashboard

21 Power Platform

Monday	Power Apps basics: canvas apps, screens, galleries, forms, data connections. Build a data entry app
Wednesday	Power Automate: triggers, actions, conditions, approvals. Build an automated workflow
Saturday	Lab: Expense tracker app + approval flow

22 Data Engineering Concepts

Monday	ETL vs ELT, data warehouses vs lakes vs lakehouses, dimension vs fact tables (star schema deep dive)
Wednesday	Data quality, validation, documentation, lineage, governance concepts
Saturday	Lab: Design a full data architecture for a company — diagram, tools, data flow explanation

Assessment: Quiz 6: Databricks + Data Engineering (20 questions)

23 Capstone Project

Monday	Work session: build final project (source → transform → model → dashboard). 1-on-1 help
Wednesday	Work session: continue building. Peer review — students review each other's work
Saturday	Lab: Polish, fix, prepare presentation

24 Career Launch + Graduation

Monday	Mock interviews: behavioural + technical. Instructor interviews each student with feedback
Wednesday	Job search strategy: where to find jobs, how to apply, networking, freelancing, pricing services
Saturday	Graduation: final presentations, certificates, LinkedIn recommendations, alumni group

Assessment: Exam 4 (Final): Full capstone project with documentation and presentation

05 · CAREER SUPPORT

LinkedIn, interviews, and job placement.

We do not just teach you and disappear. Career support helps you land your first data role — from optimising your LinkedIn profile to connecting you with recruiters and practising interviews.

What's included in career support

- **LinkedIn profile optimisation** — headline, summary, skills, and experience written for data roles
- **Resume writing** — a data-analyst-ready resume that highlights your portfolio and projects
- **Mock interviews** — behavioural and technical practice with personalised feedback
- **Recruiter connections** — we introduce you to hiring managers and recruitment partners
- **Job application strategy** — where to find roles, how to apply effectively, salary negotiation tips
- **Post-graduation support** — weekly 30-minute call for your first month on the job

Which programme includes career support

	3-Month	6-Month
Career support	Add-on: $750	Included
LinkedIn + Resume	Add-on: $750	Included
Mock interviews	Add-on: $750	Included
Recruiter connections	Add-on: $750	Included
Post-grad support (30 days)	Add-on: $750	Included

Job placement. If Nurnex connects you with an employer and you are hired, Nurnex earns a placement commission from the recruiter — at no extra cost to you.

06 · ASSESSMENT

How you are graded.

Assessment	Weight	Details
Weekly Homework	20%	Practice exercises, graded weekly with feedback
Quizzes (3 or 6)	15%	Auto-graded online quizzes
Practical Exams (2 or 4)	35%	Timed or take-home project-based exams
Participation & Attendance	10%	Show up, engage, ask questions
Presentation	10%	Data storytelling video or live presentation
Final Portfolio / Capstone	10%	Complete project showcase

Pass mark: 70% overall to earn the Nurnex certificate.

07 · TOOLS & SOFTWARE

Everything is free.

No paid software required. All tools are free to download or use.

Tool	When	Purpose
Microsoft Excel / Google Sheets	Weeks 1–2	Spreadsheet fundamentals
Azure Data Studio / DBeaver	Weeks 3–6	SQL practice and database design
Power BI Desktop	Weeks 7–12	Dashboard building and data modelling
Python + VS Code	Weeks 13–16	Programming and data analysis
Jupyter Notebooks	Weeks 13–16	Interactive coding environment
Microsoft Fabric (free trial)	Weeks 17–18	Cloud data platform
Databricks Community Edition	Weeks 19–20	Big data processing
Power Apps / Power Automate	Week 21	Business application development
Microsoft Teams	All weeks	Live class attendance

08 · INVESTMENT

Simple, transparent pricing.

	3-Month	6-Month
Full Price	$2,500	$5,000
Monthly Payment Plan	$900 × 3	$900 × 6
Early Bird (first 2 cohorts)	$1,800	$3,600
Career Support Add-on	$750	Included
Upgrade from 3-Month	—	$2,500 difference

Payment terms

- Full payment or first monthly instalment due before the first class.
- Monthly payments due on the 1st of each month.
- Payment via bank transfer (Wise / Zelle / direct deposit).
- No refund after Week 2. Full refund if you withdraw during Week 1.

Upgrade anytime. 3-month graduates can upgrade to the 6-month programme by paying the $2,500 difference and joining the next cohort's Weeks 13–24.

09 · APPLY

Start the conversation.

Book a free 15-minute call. We will answer your questions, help you choose the right programme, and get you enrolled for the next cohort.
